

IDP Project Poster Submission Guidelines

While you have the creative freedom to design the poster layout according to your own preferences, your submission must strictly adhere to the following technical specifications and include all the required content sections.

1. Technical & Formatting Specifications

- i. **Dimensions:** A1 size.
- ii. **Orientation:** Landscape or Portrait orientation.
- iii. **File Formats:** You must submit both the editable presentation file (*.ppt / *.pptx) and the compiled PDF file (*.pdf).

2. Required Poster Content

Your poster must clearly communicate your electronic engineering design and include the following sections:

- i. **Project Title:** Clearly stated at the top.
- ii. **Team Information:** Full names of all group members
- iii. **Project Overview:** A concise summary or abstract of the engineering problem and your proposed solution.
- iv. **Objectives:** The primary goals and measurable targets of the project.
- v. **Design Method:** A breakdown of your system architecture, hardware/software design methodology, or block diagrams.
- vi. **Functionalities:** The core features, operational capabilities, and testing results of your prototype.
- vii. **Project Impact:** The societal, environmental, or industrial benefits of your engineering solution.
- viii. **Key References:** Relevant academic or technical citations supporting your design.
- ix. **Video QR Code:** A scannable QR code that directly links to your published 3-Minute (3MT) Video Presentation.

Tip for Students: Ensure your text is concise and legible from a distance. Use high-quality schematics, charts, and diagrams to visually explain your electronic design rather than relying on heavy blocks of text.
